

Documentation

Overview

Step into a stylized haunted house interior with a fully functional first-person controller. This asset is designed for developers seeking a plug-and-play exploration setup—ideal for horror prototypes, architectural walkthroughs, or immersive storytelling environments.

Key Features

-  Modular haunted house interior (stylized or realistic)
-  Custom first-person controller with sprint and mouse look
-  CharacterController-based movement with gravity simulation
-  Input System integration via GameInput
-  Optimized colliders, lighting, and modular layout

First-Person Controller Breakdown

Script: Player.cs

Namespace: GhostbuGaming.VintageHauntedHouse

Core Capabilities

CharacterController

performedcanceled

transform.Rotate

Physics.CheckSphere

GameInput.Player

Awake()

Configurable Parameters

walkSpeed

runSpeed

mouseSensitivity

minimumXRotation

maximumXRoatation

cameraLerpMultiplier

Scene Details

- Rooms: Living room, kitchen, bedroom, hallway, bathroom
- Props: Stylized furniture, lighting fixtures, ambient details
- Materials: PBR or stylized shaders
- Lighting: Baked and real-time options
- Navigation: Fully walkable with colliders and occlusion culling

Setup Instructions

1. Import the package into your Unity project.
2. Open the VintageHauntedHouse.unity scene.
3. Assign the camera and character references in the Player script.
4. Ensure GameManager.inputactions is properly configured in the Input System.
5. Press Play to explore the house using the first-person controller.

Requirements

- Unity version: 2020.3 or later
- Render pipeline: Built-in (URP/HDRP optional)
- Platform: PC (VR or mobile support optional)

Licensing & Attribution

-  All textures are licensed under [CC0 \(Creative Commons Zero\)](#), free for any use without attribution.
-  All models, scripts, prefabs, and scene content were created by the author (Ghostbu) and are licensed royalty-free for commercial and personal use.
